Organon Sans

a type specimen

Organon Sans

Organon Sans Light
11/13 pt

The six weight Organon Sans typeface is a stylish, legible and feature-laden OpenType family which complements its sister, Organon Serif.

Both Organon families work in tandem to form an elegant and thoughtfully designed suite of fonts sharing similar cap heights, stem widths and design characteristics.

Tapered stems and terminals give Organon Sans an attractively robust appearance. An extensive glyph palette includes multiple ligatures and both lining & old style numerals in proportional and tabular widths.

Alternate between different versions of letters a, g & y by using the 3 additional style sets in OpenType compatible software.

9/11

There will always be demand for fresh new alternative sans serif typefaces but thankfully 'clean' and 'legible' are no longer bywords for boring and traditional. The trickle of 'text faces with a twist' has become a torrent due to the huge growth of independent micro foundries empowered by the web and ever improving development tools.

There will always be demand for new alternative sans serif typefaces but thankfully 'clean' and 'legible' are no longer bywords for boring and traditional. The trickle of 'text faces with a twist' has become a torrent due to the growth of independent micro foundries empowered by the web and ever improving development tools.
